ABOUT ME

First-Class BSc (Hons) Software Engineering graduate with experience delivering full-stack Websites and mobile applications for real clients. Recognised for academic excellence, including a university award for Best Final Year Project in Software Engineering. Built and deployed production applications used by clients in the UK and Anguilla. Passionate about building secure, scalable software and eager to contribute to high-impact engineering teams.

EDUCATION

De Montfort University Leicester, UK

BSc (Hons) Software Engineering

First Class (Distinction)

Degree Mark: 80/100 | Sept 2022 – July 2025

AWARDS

Best Final Year Project in Software Engineering— Smart Finance Manager App

PROJECTS

Full-Stack Service Booking Website

Tech: React, Firebase, Stripe, Resend API, Node.js

Developed and deployed a full-stack booking platform for UK and Anguilla clients using React, Firebase, and Stripe. Built real-time scheduling, service management dashboards, and responsive UI with automated email notifications for bookings and cancellations.

Smart Finance Manager App (Cross-Platform)

Tech: Flutter, Dart, Firebase (Auth, Firestore), TrueLayer API, Local Auth (Biometrics)

Developed a comprehensive personal finance application featuring real-time expense tracking, AI budget insights, and gamified financial education. Implemented seamless OAuth and native Biometric security, alongside robust user profile management and secure bank synchronization via TrueLayer.

The 411 (Substance Education Mobile App)

Tech: Flutter, Dart, SQLite (sqflite), Flutter Local Notifications, url_launcher, share_plus

Developed a cross-platform harm reduction mobile app for the University of Leicester's Centre for Ethnic Health Research. The app utilizes data-driven tracking and a modern, high-fidelity UI to provide young adults with non-judgmental drug and alcohol education and recovery tools. (Not Yet Released)

WORK EXPERIENCE

Graduate Software Engineer | Legal-Pythia LLP (Little Birdie fintech project) | Aug 2026 – Sept 2026

- Built a multi-tenant organisation and team system on an AWS AppSync/GraphQL, DynamoDB and Cognito backend, including invite flows, owner/admin/member permissions, member limits and legacy account migration.
- Fixed backend bugs across Cognito, AppSync resolvers and GraphQL schemas, and rebuilt the Team Management interface in Next.js to be fully responsive.
- Built a lead-generation widget with Zod form validation and GraphQL integration.
- Redesigned the Add Subscription flow into a single form with debounced provider search and automatic category assignment, and traced a category-matching issue through the resolver layer back to inconsistent source data.

Freelance Software Developer | Self-Employed | 2025-2026

- Contracted by a client to design and deploy a full-stack physiotherapy service booking platform,.
- Integrated Stripe for payment processing, Elfsight API to display live Google Reviews on the site, Firebase for real-time data, and Resend API for automated email notifications on bookings and cancellations.
- Built a comprehensive admin dashboard enabling the client to manage bookings, services, reviews, and business operations end-to-end — with no technical knowledge required. As well as detailed financial metrics for the business

SKILLS

TECHNICAL SKILLS

Languages: JavaScript, Python, Dart, Kotlin, C++, PHP, HTML, CSS, TypeScript

Frameworks & Libraries: React, Flutter, Node.js, TensorFlow Lite, Next.js

Tools & Platforms: Firebase, Stripe, Plaid API, Git, GitHub, Android Studio, IntelliJ, Arduino IDE, Blynk, Truelayer API, AWS (AppSync, DynamoDB, Cognito, CDK) and GraphQL

Specialisms: Full Stack Web Development, Cross-Platform Mobile Development, IoT & Embedded Systems,

SOFT SKILLS

Problem Solving • Team Collaboration • Time Management • Version Control • Client Communication
